How do I use Course level Media Gallery tool in Arrivu Apps?

Media Gallery tool in Arrivu Apps enables you to view, upload, and search video directly from your Arrivu Apps environment. This allows pictures, audio files, and videos to be played directly within Arrivu Apps. Users can create dynamic collections of media that can be categorized, sorted and filtered.

User can easily access the Media Gallery in Arrivu Apps.

Open Media Gallery

Click the **Media Gallery** link in the course navigation.

View Media Gallery

The screenshot shows the 'View Media Gallery' header. Below it, there are four main components: a 'Category' dropdown menu (1) currently set to 'All Categories', a search input field (3) with a 'Search' button, and a row of four action buttons: 'Add Media', 'Record', 'Add Category', and 'Manage Category' (2).

1. In Media Gallery, select an option from the Category drop down menu, the media with metadata that includes the category file is displayed.

2. You can add or record media, add category and manage those categories using Media Gallery.

3. On the Media Gallery, enter a search string (such as a tag or part of a title) in the Search field. The media with metadata that includes the search string is displayed.

To upload Media from your Desktop

Click Add **Media** button. The Add Media page is displayed.

Add Media

The 'Add Media' form includes a title bar with a close button. The main content area contains: a row of 'Select File' and 'Select Folder' buttons (1); a 'Description' text area (2); a 'Category' dropdown menu (3) currently showing 'None selected' and an 'Add Category' button (8); a large yellow drag-and-drop zone with the text 'Drag And Drop your file here' (4); and a row of three buttons at the bottom: 'Upload' (5), 'Pause' (6), and 'Cancel' (7).

You can do the below actions while you are adding a new media item.

1. Click **Select file** or **Select Folder**

In the Select file to upload window, select a media file to upload and click **Open**.

2. Add **Description** about the media.

3. You can select **Category** - If you have category divisions, you can add this information to your media, so that it can be viewed by category.

4. You can **Drag and Drop** your media files.

5. Click **Upload** button after you have selected a media file.

6. You can **Pause** your uploading progress.

7. You can **Cancel** your uploading progress.

8. You can add new category by clicking the **Add Category** button.

Note: You can add any video format to your media gallery.

In the Comments Section under the media player, enter a comment in the text field [1] and click **Comment [2]** button.

If the comments were entered, they are displayed in the Comments area [3] under the media metadata.

Add Media in Rich Content Editor

The screenshot displays the Arrivu Next Generation Learning interface. On the left, a navigation menu lists various course elements: Home, Assignments, Announcements, Forum, Grades, People, **Pages** (highlighted with a red box and a circled '1'), Syllabus, Quizzes, Files, and Videos. The main content area shows the 'EG562' course page with a breadcrumb trail 'EG562 > Media page'. Below the breadcrumb, there's a section for page settings with options like 'Hide this Page from Students', 'Only Teachers' (selected), 'Allow Comments on this Page', 'Change Wiki Type' (set to 'Pages'), and 'Notify users that this content has changed'. At the bottom of this section are 'Cancel' and 'Save Changes' buttons. On the right, the 'HTML Editor' is visible, showing a toolbar with various icons. A red arrow points to the 'Create wiki' icon (a document with a plus sign) in the toolbar, which is circled with a '2'. The right sidebar contains 'Page Tools' (Rename this wiki, Delete this wiki) and 'Insert Content into the Page' (Links, Files, Images). The 'Wiki Pages' list includes: Faq, Front Page, Learn English Grammar Beginner, Media Page, Noun, Verbs In English, Video Front Page, What is a Sentence?, Assignments, Quizzes, Announcements, Discussions, Classes, and Course Navigation.

Arrivu Apps Video App allows you to embed rich-media inside rich-Content element such as Discussions, Announcements and Course Pages.

1. Click **Pages** [1] link in the course navigation to add media items to pages.
2. Click the **Create wiki** button in the right side of the screen.
3. Choose **Gallery** [2] icon to add media items in to pages.

Note: Using Rich content editor, you can add media to your pages, announcements, discussions, syllabus and quiz descriptions. You can add those pages to the class items.

What is Course Media Analytics in Arrivu Apps?

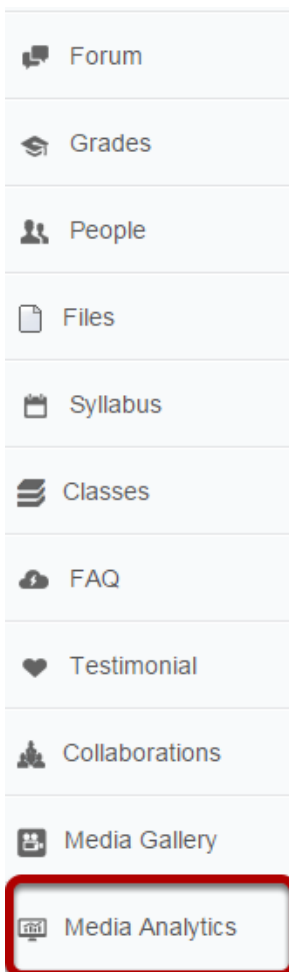

Media Analytics is a tool in Arrivu Apps which teachers can access to view different engagement reports for the students who have enrolled in a course.

Teachers can easily access course-specific video analytic reports directly from the Arrivu Apps. They can also view the most viewed videos and students who are most engaged to your media gallery.

Note: For each media entry, details such as the number of plays, total view time, average view time, average drop-off rate, storage, bandwidth etc. are displayed on the Summary Reports.

The **Student View analytics** report lists all the Students who have viewed at least one video from the Media Gallery. For each Student, the total view time, average view time and average drop off-rate are presented.

Open Media Analytics

Click the **Media Analytics** link in course navigation.

How to record screen with voice using Sharex ?

ShareX is a free and open-source screen recording and screen casting program for Microsoft Windows. It is used to create full screen or partial screen captures.

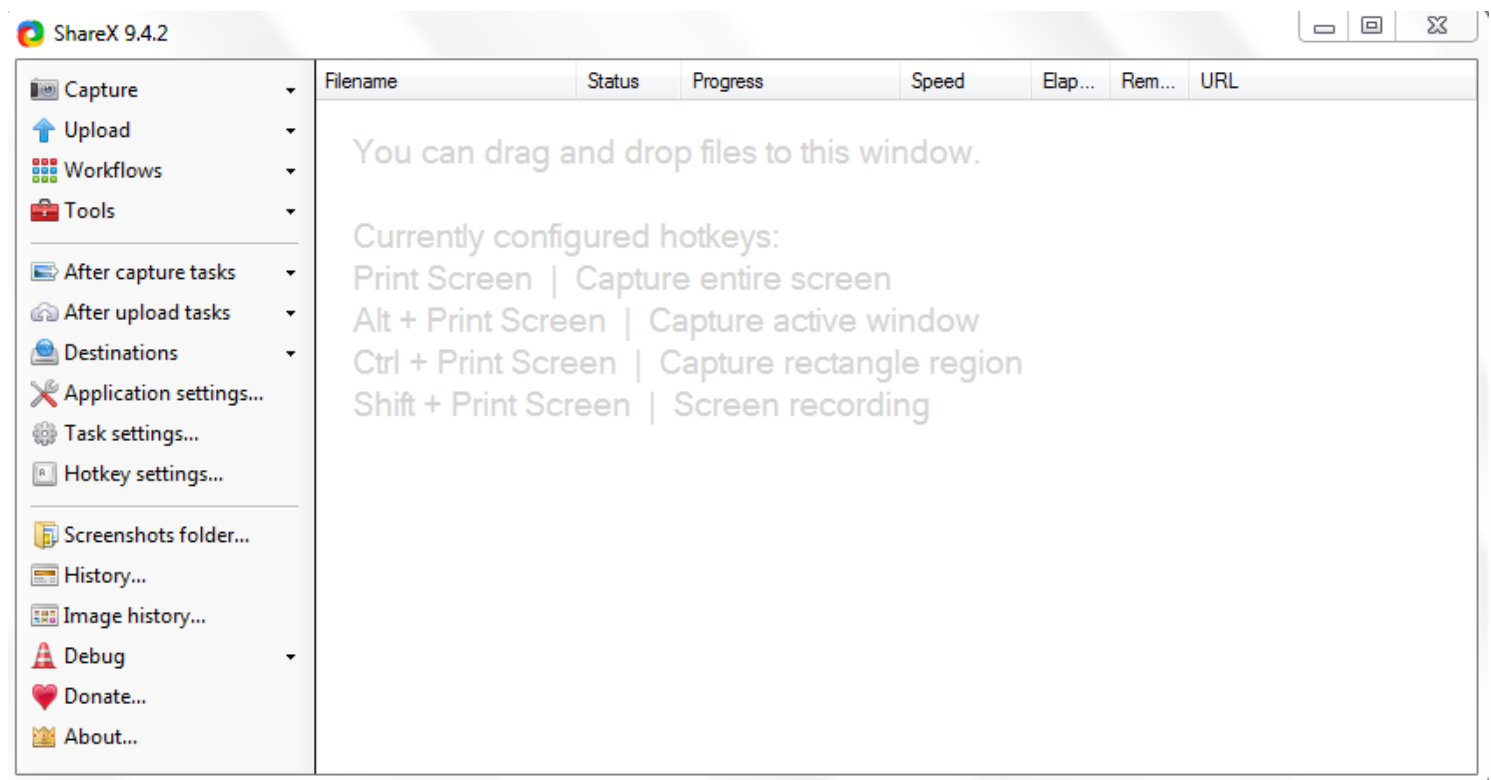

Note: You can download and install ShareX in your machine using <https://getsharex.com/> the link.

Open ShareX

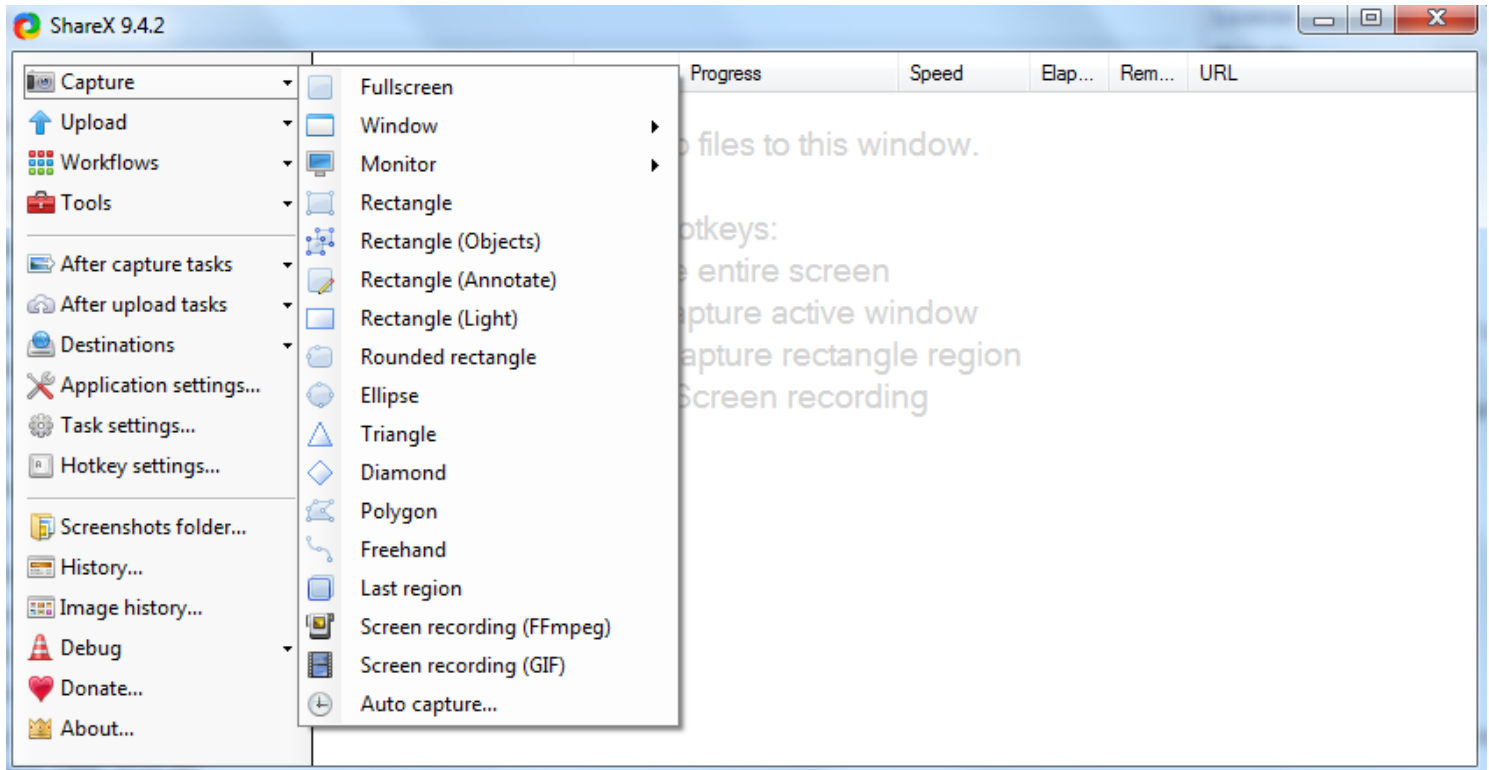

Click the **ShareX** icon on your Desktop.

View ShareX

View the ShareX window.

View Capture Options

ShareX incorporates the following methods to allow screen capture:

For Images:

Fullscreen: Creates a screenshot of the entire screen area.

Active window: Captures the currently active window.

Active monitor: Captures the monitor area where the mouse pointer or cursor currently resides.

Window menu: It lists the active windows, so that user can select which window to take screenshot of.

Monitor menu: It lists monitors, so that the user can select which monitor to take screenshot from.

Rectangle: Allows user to take screenshot from a single or multiple rectangular areas drawn with the mouse by dragging it from one corner to the diagonally opposite corner of the rectangle.

Rectangle (Objects): Allows user to take screenshot of a rectangular area. When the user hovers window or an object, it will automatically select rectangular area, so that the user does not need to drag the area using the mouse.

Rectangle (Annotate): This rectangle capture is similar to the Light version mentioned below, but it also allows the user to draw in the capture area.

Rectangle (Light): Basic version of Rectangle capture designed for slow computers.

Rounded Rectangle, Ellipse, Triangle and Diamond: These options work similar to rectangle capture with only difference which is the shape.

Polygon: Allows the user to click points on screen to make polygon shape to capture areas inside it.

Freehand: Allows the user to draw areas just like drawing with pencil and the drawn area will be captured.

Last Region: Will repeat the screen capture which was done most recently.

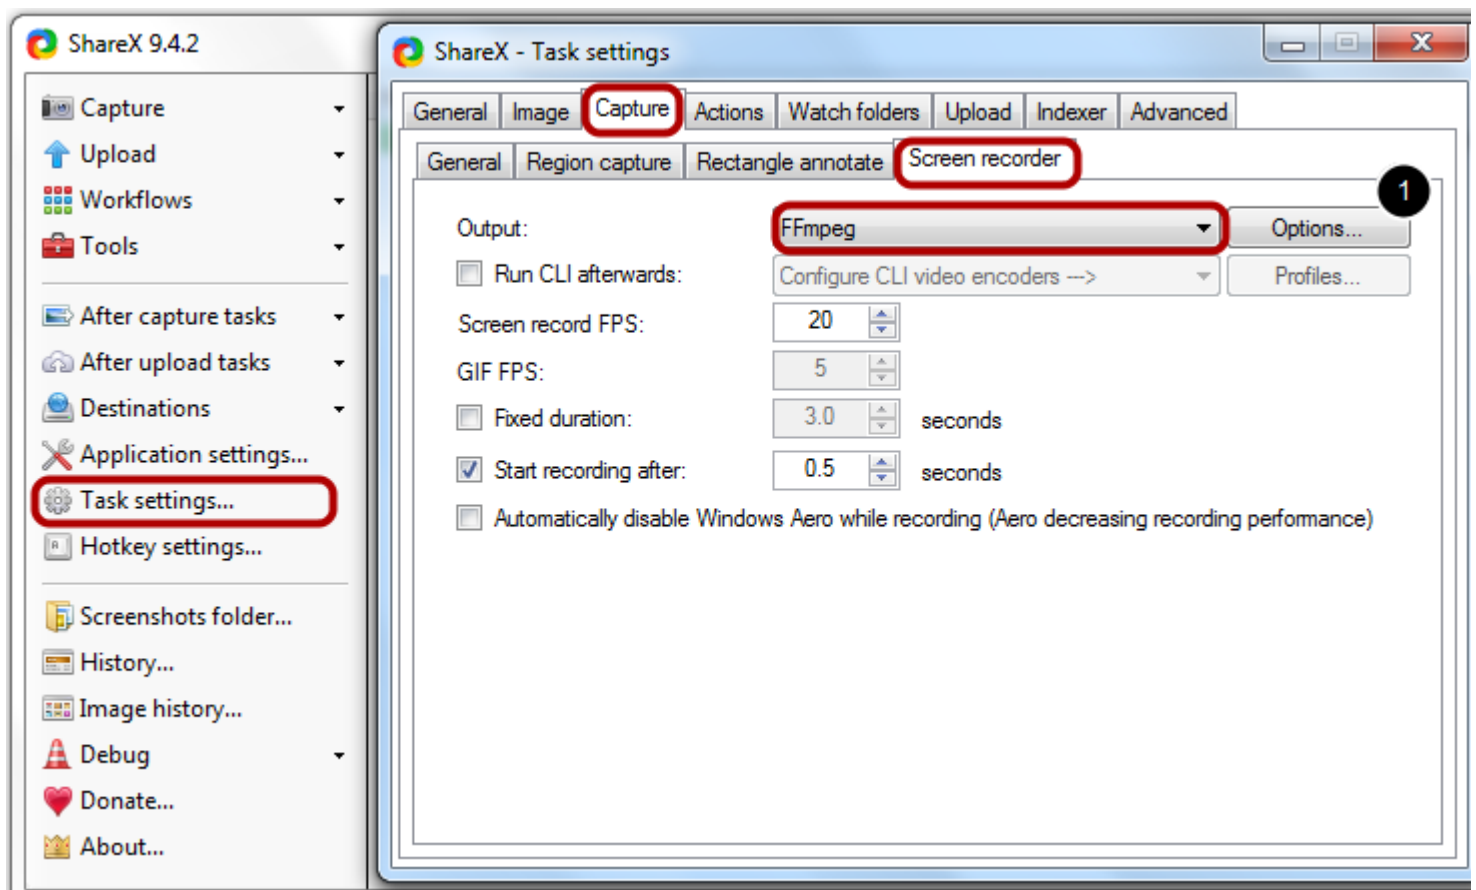

For Videos:

Screen recording (FFmpeg): Users can record a selected area on their screen or the entire screen. FFmpeg allows user to record screen including sound and compress it in real time using x264, VP8, Xvid etc.

Screen recording (GIF): User can record a selected area on their screen or the entire screen in animated GIF.

Auto capture: Allows the user to automatically capture a screen area with the specific time interval.

In the Screen recorder tab set Output to FFmpeg

In the **Main window** -> Choose **Task settings** -> In the Task Setting Window Choose **Capture** -> **Screen recorder**. Choose **FFmpeg** as the output format from the output drop down menu.

You can change the Following Screen Recording Options:

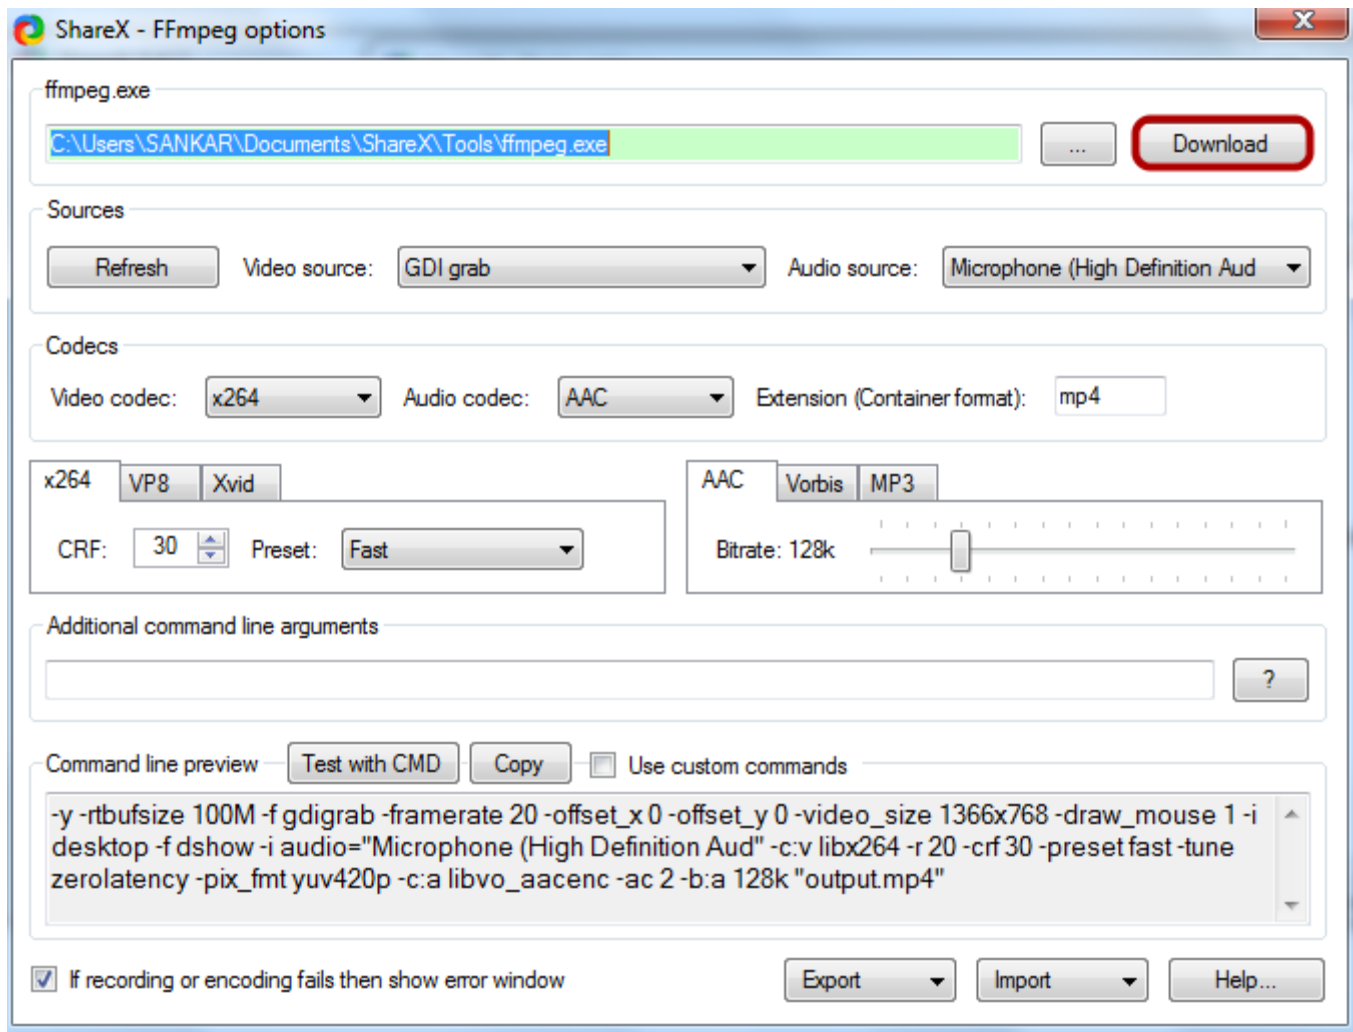

Screen Recorder FPS means how many frames are being recorded per second. 20 frames are ideal for desktop recording.

Fixed duration will stop recording after that duration. While using a hotkey, duration is not required because you can stop recording any time you want. It is mainly useful for make animated GIF, so , it is suggested to disable it.

Start delay option sets when the recording will start. So, 0.5 seconds will give you enough time to move your cursor to the recording area before the recording starts.

Click the **Options** button to set the FFmpeg recording options.

FFmpeg options

When you press the **Download** button, the latest version of FFmpeg will automatically download and extract itself to Tools folder.

You don't need to manually download the FFmpeg from web site.

Video sources

The sources section only loads if the FFmpeg file exists.

None - Does not record audio.

GDI grab - Records the screen with built-in FFmpeg methods.

Camera - If you have a camera, it will show up in the video sources list. This allows you to record from it.

screen-capture-recorder - Records the screen using the open source DirectShow filter. It will be installed as part of ShareX. If you are planning to record audio with the Virtual Audio Capturer, then use this instead of GDI grab.

Audio sources

None - Does not record audio.

Microphone - If you have a microphone, it will show up in audio sources, and it will allow you to record from it.

virtual-audio-capturer - Records what you hear using the open source DirectShow filter. It will be installed as a part of ShareX.

Video codecs

x264 - Uses libx264. x264 is a H.264/MPEG-4 AVC encoder. This is our recommended video codec to use.

Note: Having good quality/compression can cause frame drops while recording, because compression happens in real time, and it uses the CPU heavily.

Therefore we suggest the Fastpreset. If the frames still drop a lot, try increasing the preset to Very fast (or higher) until you get better results. Increasing CRF helps with performance too, at the cost of video quality.

VP8 - Uses libvpx. VP8 video encoder for WebM, an open, royalty-free media file format.

Note: WebM doesn't support the AAC and MP3 audio codecs. Use the Vorbis audio codec.

Xvid - Uses libxvid. Xvid (formerly "XviD") is a video codec library following the MPEG-4 standard, specifically MPEG-4 Part 2 Advanced Simple Profile (ASP).

Note: Video doesn't work with MP4. Use the AVI or MKV containers.

Audio codecs

AAC - Uses libvo_aacenc. Advanced Audio Coding (AAC) is the successor format to MP3, and is defined in MPEG-4 part 3 (ISO/IEC 14496-3). It is often used within an MP4 container format; for music the .m4a extension is customarily used.

Vorbis - Uses libvorbis. The Theora video format, Vorbis audio format, and Ogg container format were developed by Xiph.org as free and open-source media formats.

Note: Use this audio codec with VP8 (WebM).

MP3 - Uses libmp3lame. MPEG-1 or MPEG-2 Audio Layer III, more commonly referred to as MP3, is an encoding format for digital audio which uses a form of lossy data compression.

Container format

Extension (Container format): mp4

Type the Extension format in the Container Format textbox.

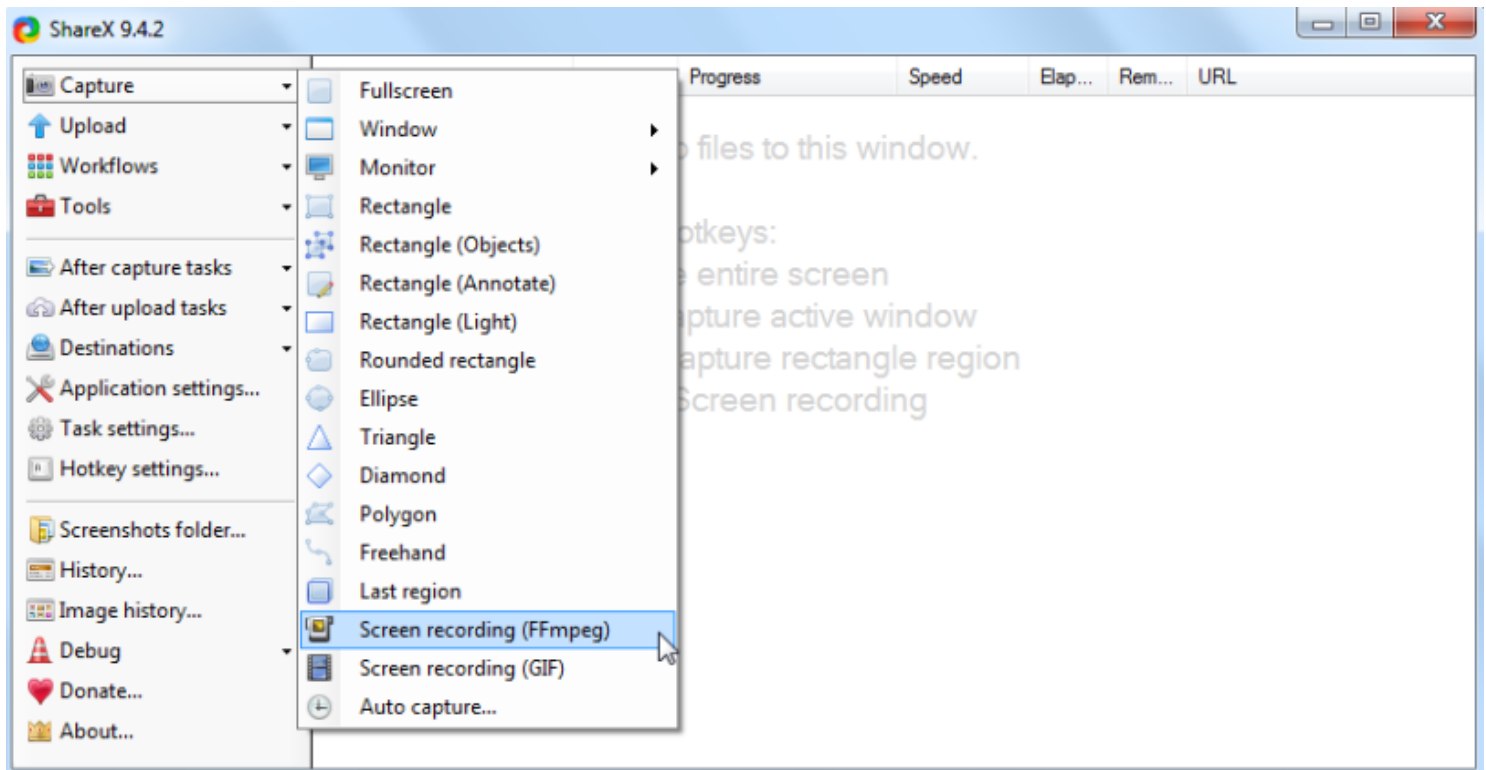

MP4 - Suggested for x264. MPEG-4 Part 14 or MP4 is a digital multimedia format most commonly used to store video and audio. This can also be used to store other data such as subtitles and still images.

WebM - Suggested for VP8. WebM is an audio-video container format designed to provide royalty-free, open video compression for use with HTML5 video.

MKV - The Matroska Multimedia Container is an open standard free container format. It is a file format that can hold unlimited number of video, audio, picture, or subtitle tracks.

AVI - Suggested for Xvid. Audio Video Interleaved (also Audio Video Interleave), known by its initials AVI, is a multimedia container format introduced by Microsoft in November 1992 as part of its Video for Windows technology.

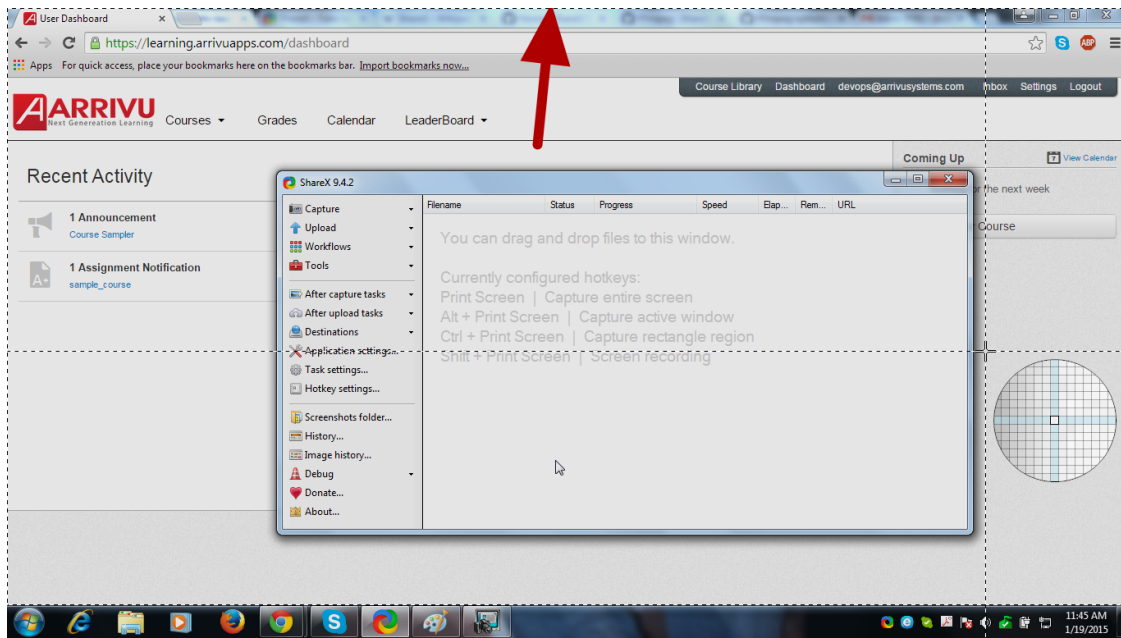

Screen Recording

Choose **Screen recording (FFmpeg)** option to record screen including sound.

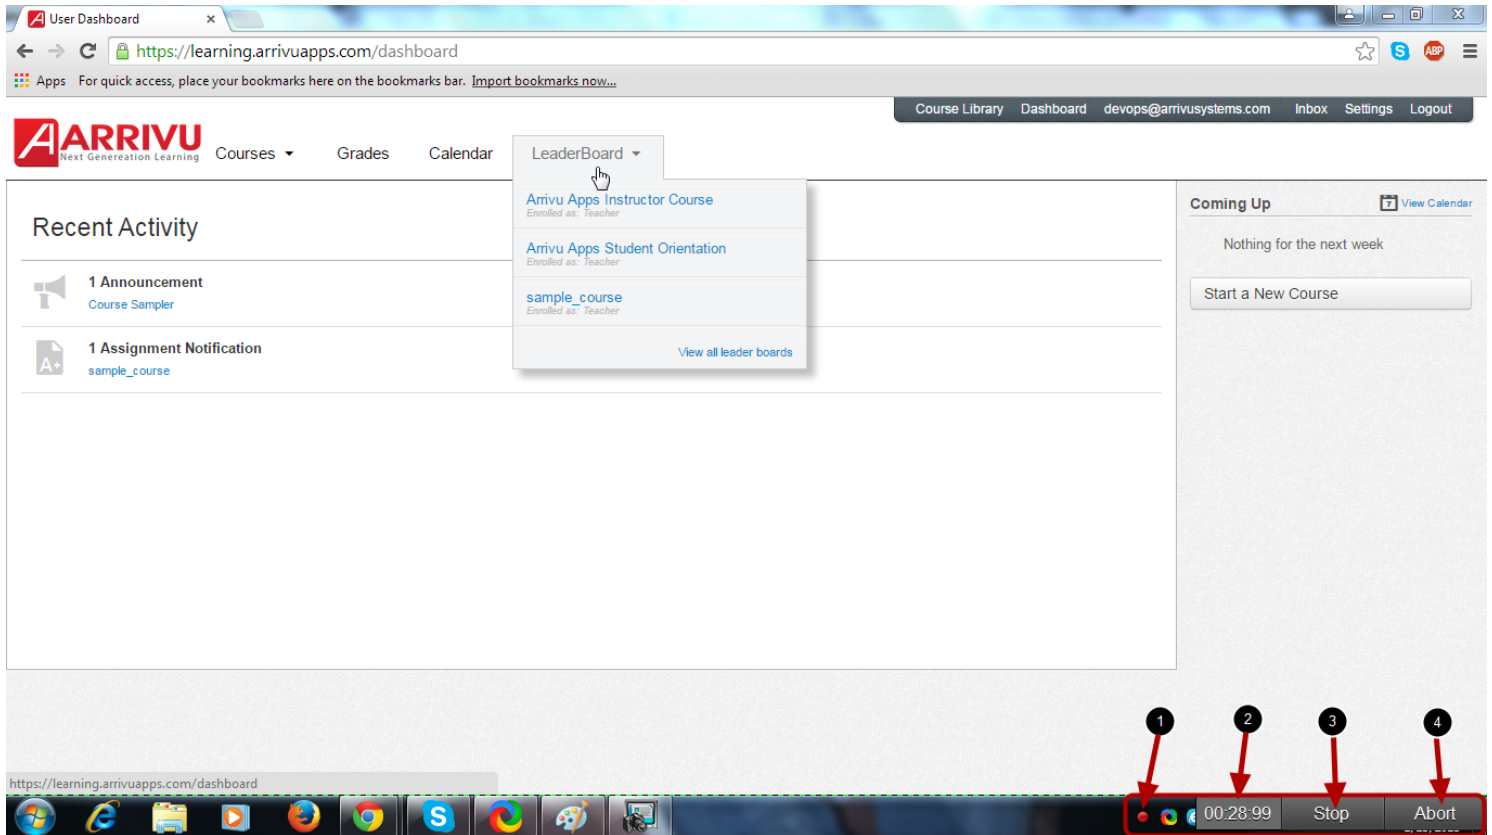

Plug in the Microphone in to your machine to Record .

Choose Region

Choose the Recording region for Screen Recording.

Screen Recording

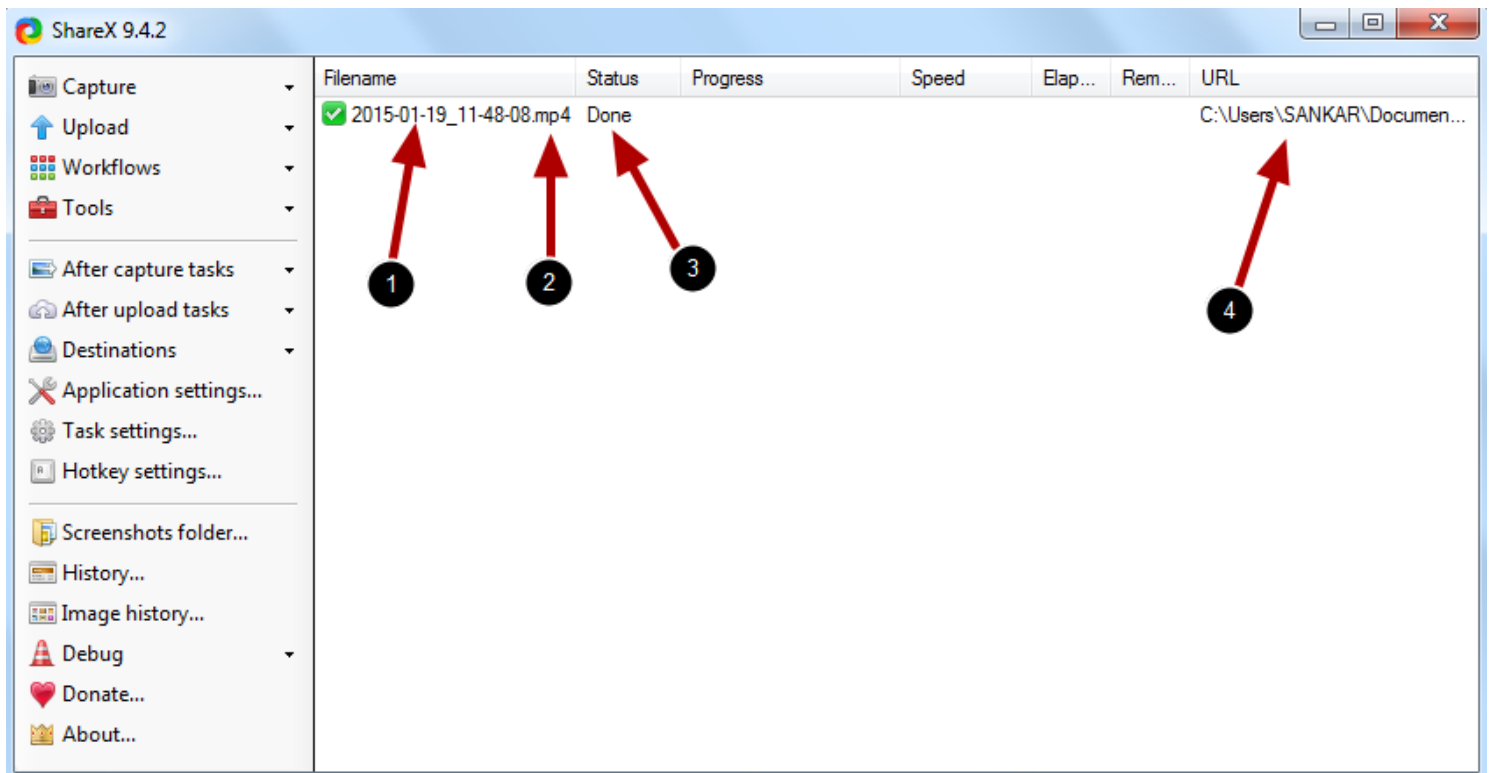

Once you choose the recording region, the screen will start recording automatically.

You can view the recording time in the bottom right corner of the screen.

Red color Dotted Circle [1] indicates the screen recording, You can view the screen recording **time [2]** , once you have finished your recording click the **Stop [3]** button to stop recording.

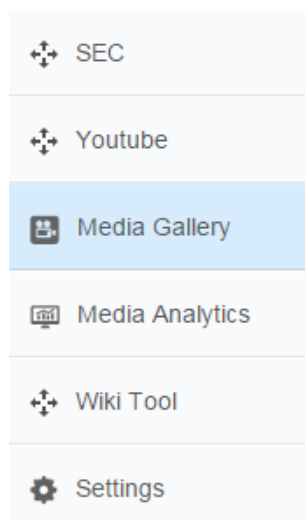

Click **Abort [4]** button while you recording the screen to abort the recording process.

View Recorded file

View the Recorded file's name [1], file format [2], status [3] of the file and the location [4] where the recorded file was saved in your machine.
